

Pharmaceutical Track & Trace now you can do it all in-line!

*Pharmacarton Coding Station
for Track & Trace and French CIP13*

LOT 2345678
EXP 02/2012
01457855697564

The Pharmacarton Coding Station is an established design for in-line, high resolution digital printing of lot, expiry and 2D Datamatrix codes for pharmaceutical and medical cartons. The new design overcomes the problem of printing high density barcodes and 2D codes to ECC200/GS1 standards on line, by totally controlling the carton during the print and vision process.

The turnkey system combines a precision multi-belt conveyor with a synchronised top hold down belt and is integrated with a high resolution inkjet printer, and an OCR/OCV optical character verification system. A fail-to-safety reject unit with pack reject confirmation compliments the overall design.

This fully integrated module provides pharmaceutical and medical manufacturers with an easy to operate, flexible system to meet a variety of coding requirements. The station is easily integrated into existing packaging lines without extension, and is adjustable to suite a range of carton sizes.
