

Casecoding Off-Line.....

With the Travtec TR-1000 Casefeeder

Simplify your stock control by labelling and coding your cases off-line!

The TR-1000 Casefeeder is designed to feed flat, unerected corrugated cases for coding with inkjet, labelling, or print & apply. The case is presented to the inkjet printer or labeller in a vertical orientation, allowing both sides (4 faces) to be accessed in one pass.

The Casefeeder can be supplied either as a turnkey system, or for integration with existing equipment to maximise cost benefits, and minimise downtime. Changeovers between product runs can be completed in less than 5 minutes, and the Auto-Stak outfeed unit presents the finished cases neatly stacked for easy removal by the operator .

TECHNICAL SPECIFICATION:

- Construction:** *Powder coated steel framework to high quality finish. Heavy duty drives. Quick-change design. CE Certified*
- Controls:** *Electro-pneumatic, with PLC controller. Operator interface with intermittent & continuous feed. Batch counter.*
- Power Required:** *110/220/240 v AC Single phase. 1.5 kW loading. Clean/dry compressed air at 5 BAR.*
- Throughput:** *20—45 cases per minute depending on case length.*
- Case Sizes:** *Length: 300 -1000mm; Width: 300 - 800mm; Thickness: 3 - 10mm.*
- Dimensions:** *Length: 3000mm; Width: 1475mm; Height: 1150mm.*
