

On-line Basecoding.....

With the Travtec Diverter 3

Inkjet on to the base of bottles, jars & cans with the Diverter 3

The Diverter 3 is designed to mount to existing conveying lines for coding on the base of containers with a continuous inkjet printer or laser. Used where it is inconvenient to create a gap in the line, it is easily attached to most conveyors up to 150mm wide. An extended version is available to add a camera for checking the printed information.

Adjustment between container sizes takes only seconds, and the twin side-belt synchronised drives ensure positive container control and guidance.

Manufactured mainly in stainless steel, the Diverter is suitable for most environments.

TECHNICAL SPECIFICATION:

Construction:	<i>Stainless steel. Quick-change design. CE Certified</i>
Controls:	<i>Motor speed control in enclosure with heavy duty synchronised drives.</i>
Power Required:	<i>110/240 v AC Single phase. 0.5 kW loading.</i>
Speed:	<i>Variable up to 30 mtrs per minute.</i>
Product Sizes:	<i>Diameter: 20 –120mm; Height: 400mm.</i>
Dimensions:	<i>Length: 596mm; Width: 575mm; Height: 350mm.</i>

Protected under patent numbers: 2222111, 5207155
